DISCOVER THE FIRST-EVER COMMUNITY-OWNED METAVERSE GAME

Lucky Strike is the first-ever gaming platform that delivers a seamless non-custodial and provably fair metaverse casino experience. People can play online games (such as slot machine, blackjack, roulette, video poker and others). Games results are guaranteed to be absolutely random by using **provably fair** technology (based on strong cryptographic algorithms)

Leveraging the Binance Smart Chain, Players can hit the tables virtually and play games with cryptocurrency. Additionally, players can create their own Avatars, make new friends, and win legendary NFT wearables. Wearing Decentral Games'NFT wearables during game play and playing at tables with more than one player boosts players \$LKS rewards.

PROVABLY FAIR

When you open the game page the server generates a secret and a seed and reveals its hash (using HMAC SHA256 algorithm). The server secret represents initial reels positions. The server seed is a cryptographically secure random alpha-numeric string. The hash of these 2 strings helps to ensure that the initial reels positions are not altered after you choose the number of lines and bet amount. After the game is finished the server secret and the server seed are revealed, so you can easily calculate and verify the hash.

PROVABLY FAIR

When you play a game you can pass an extra custom string—client seed (if it's not specified a random number is automatically generated by your browser). The server will then calculate another hash using the server secret, the server seed and the client seed. The last 5 chars of this hash (representing a hexadecimal value) will be converted to an integer. Each digit in this number will result in an extra number of spins on the corresponding reel (from left to right). Because the client seed can not be predicted by the server the number of extra spins is completely random and hence you can be sure that the game result is fair.

THE MOST POPULAR GAMBLING GAMES

Fruit Slots game

Dice

Horse Racing

Blackjack

More game will list on Lucky Strike. Lucky Strike provide an API that the games develop teams can upload their games. To upload a game, the owner of the game should deposit \$10,000 worth of tokens. All the game contracts must be audited and pass the test of Lucky Strike. The rate of win-loss should be around $50\% \pm 3\%$.

The more detail include listed fee or service fee will announce after the Community DAO start up working .

You can be the owner of Lucky Strike if you HODL the NFTS.
